

We operate our own fiber network and multiple own data centers, where our business customers can find a safe place for their operations or profit from our managed services. We are based in Ludwigshafen am Rhein, our business area stretches from Homburg to Heidelberg. We have been operating for over 25 years and are a reliable and trusted partner for many companies and institutions including critical infrastructure.

We are hiring a

Senior Network Engineer

for our team IP network operations. The team is responsible for the operation of our MPLS and VXLAN based networks and provides Layer-2/3 connectivity for internal and external customers. The products the team supports include internet connectivity, site-to-site & direct cloud connections and VoIP lines. We operate devices in over 200 points of presence. Our aim is to provide high quality and stable connectivity.

Your job

- As part of our expert team, you are supporting constant growth and optimization of our network
- You are aware of the current state the network and help evaluate new technologies
- You design and optimize surrounding business processes and technical automation
- You support colleagues and customers with finding the best solution for their needs
- You operate active Ethernet connections to customers and take part in our on-call rotation

Your skills

- You are innovative and interested in learning new technologies and operating constantly evolving networks
- You completed training in IT/network operators or have comparable work experience
- You have knowledge of WAN network and system administrations, of routing protocols and troubleshooting tools, also in connection with voice services
- You are motivated to do varied work
- You have experience in operating MPLS networks and autonomous systems and a high sense of responsibility and quality awareness
- You are fluent in German and (at least) basic English and have a driving license (class B)
