

Network Software / Reliability Engineer (m/f/d)

The Position

You are part of our DevOps team Infrastructure / Network. You operate our Germany-wide backbone with own ASN and Internet peerings with the German and European access networks in the Tbit/s range. You ensure the stable and performant operation of our network platforms (wide area traffic, data center, multicast ingest) for an excellent IPTV operation and further develop the automation. You support the team with network/BGP on the GNU/Linux hosts and with the development of our own CDN playout system.

Your tasks

- Operation of IP networks based on Juniper (PTX-Series) and GNU/Linux hosts
- ISP IP peering "Internet-scale" with BGP
- Architecture and development of the software landscape required for operation
- Provision of IP streaming network in the Tbit/s range with low latency, no jitter and excellent availability
- Operation and further development of the fully automated platform
- Monitoring (SLA) of the various network parameters
