

We operate our own fiber network and multiple own data centers, where our business customers can find a safe place for their operations or profit from our managed services. We are based in Ludwigshafen am Rhein, our business area stretches from Homburg to Heidelberg. We have been operating for over 25 years and are a reliable and trusted partner for many companies and institutions including critical infrastructure.

We are hiring a

Network Engineer IP+VoIP

for our team IP network operations. Embedded in the network infrastructure for IP services, we provide SIP services for our internal and external customers using state-of-the-art switching technology. We ensure trouble-free operation, create complex customer solutions and design the telephony of tomorrow in our high-performance IP network.

Your job

- You will administer and support our IP-based communication platforms
- You will manage and document the maintenance of the system platforms by system suppliers and service providers
- You will design and optimise accompanying business processes and technical automation
- You carry out interoperability tests with other voice network providers
- You optimise our IP Next Generation Network and support its further expansion
- You take over on-call services and look after end devices (CPE)

Your skills

- You are innovative and interested in learning new technologies and operating constantly evolving networks
- You completed training in IT/network operators or have comparable work experience
- You have knowledge of SIP based systems and troubleshooting tools
- Having experience in operating MPLS networks or autonomous systems is beneficial
- You have a high sense of responsibility and quality awareness
- You are fluent in German and (at least) basic English and have a driving license (class B)
