Network Engineer (F/M/D)

ABOUT THE ROLE

We're seeking a Network Engineer who is passionate about building and operating global networks. Join us as we build and deploy Inter.link's worldwide backbone, develop new products, release new features that help our customers. You'll work together with other members of the Infrastructure team to ensure quality service for Inter.link's customers.

YOUR PROFILE

In your role, you will be responsible for ensuring network services are implemented, delivered on time, operated, and supported. You will help to incorporate customer requirements into our product development and overall strategy.

It is important that we continuously work towards improving our network. Daily tasks will include problem and incident management to ensure that the network is running efficiently and reliably. Managing the deployment and day-to-day operations and implementing proactive monitoring and maintenance procedures to guarantee uninterrupted service is in your DNA.

Additionally, you will be responsible for 2nd and 3rd-level support when needed.

Stefan our Head of Global Infrastructure is looking forward to hearing from you!
